The letters "pH" represent the French words "pouvoir hydrogene" which means "hydrogen power".

The definition of pH is pH is equal to the negative $\log$ (logarithm) of the ___ ion concentration of a solution.
$\square$ The logarithm of a number is the power to which 10 must be raised to equal that number.
A pH value of less than 7 indicates a(n) $\qquad$ solution. A pH value of $\qquad$ indicates a neutral solution. A pH value of more than 7 indicates $\mathrm{a}(\mathrm{n})$ solution.

PROBLEMS: Show all work and circle the final answer.

1. Determine the pH of a $0.010 \mathrm{M} \mathrm{HNO}_{3}$ solution.
2. What is the pH of a $2.5 \times 10^{-6} \mathrm{M}$ solution of HCl ?
3. Calculate the pH of a solution of $0.0025 \mathrm{M} \mathrm{H}_{2} \mathrm{SO}_{4}$.
4. Calculate the pH of a 0.0010 M NaOH solution.
5. What is the pH of a $0.020 \mathrm{M} \mathrm{Sr}(\mathrm{OH})_{2}$ solution?
6. a) What is the hydrogen ion concentration of an aqueous HCl solution that has a pH of 3.0 ?
b) What is the hydroxide ion concentration of this same solution?
c) Which ion, $\mathrm{H}^{+}$or $\mathrm{OH}^{-}$, is in greater concentration?
d) Is this solution acidic or basic?
7. Find the $\left[\mathrm{H}^{+}\right]$and the $\left[\mathrm{OH}^{-}\right]$of a solution with a pH of 3.494 .

Is this solution acidic or basic?
